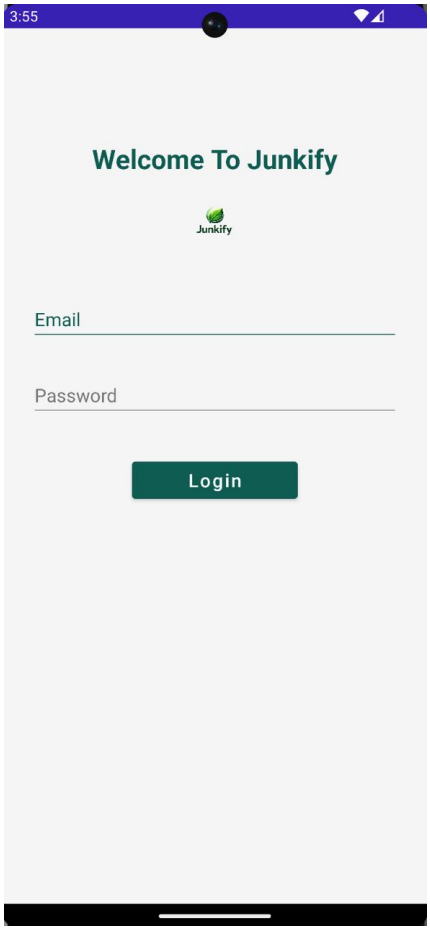
Project Description

Junkify is an eco-friendly Android application developed to make waste management simple, organized, and user-friendly. In today's world, improper disposal of waste creates pollution, spreads dirt, and harms the environment. To solve this problem, Junkify provides a smart digital platform that encourages people to dispose of waste responsibly and contribute to a cleaner and greener society.

The application allows users to log in and access a dashboard where they can use different services. Users can view nearby waste centers and book a trash collection slot according to their convenience. The app also includes a Your Bookings section where users can check their booking details such as center name, waste type, date, time slot, status, and earned points. This makes the entire waste collection process transparent and easy to manage.

One of the main highlights of Junkify is its Points and Rewards system. When a user completes a booking successfully, reward points are added to their account. These points can later be used to generate vouchers, which motivates users to continue following eco-friendly practices. The app also includes a Rate Last Collector feature, where users can provide ratings and feedback based on the service they received. This helps improve service quality and user satisfaction.

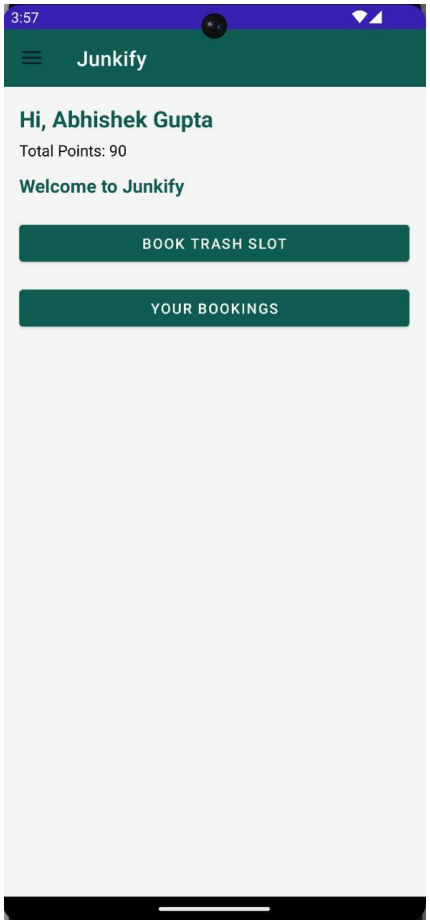
Overall, Junkify is not just a booking application; it is a smart initiative toward environmental cleanliness and sustainability. It combines technology with social responsibility to create a better waste management system.



Login Page -

This page allows users to securely log into the Junkify app using their email and password.

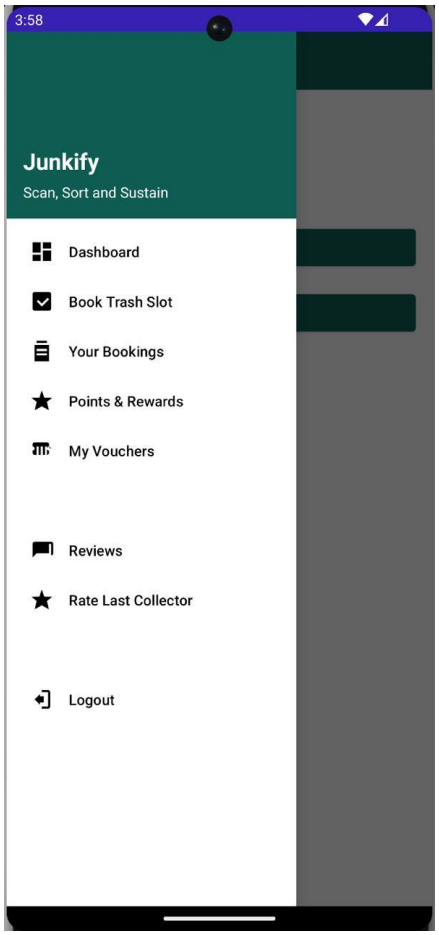
It serves as the entry point for accessing all features of the application.



Dashboard (Home Screen)-

This screen welcomes the user and displays their total reward points.

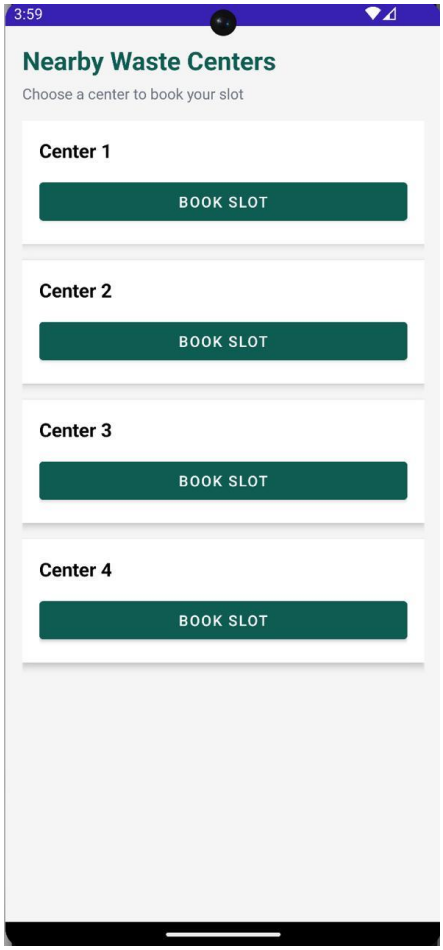
It provides quick access to key actions like booking a trash slot and viewing bookings.



Navigation Drawer (Menu)-

This side menu provides easy navigation across different sections of the app.

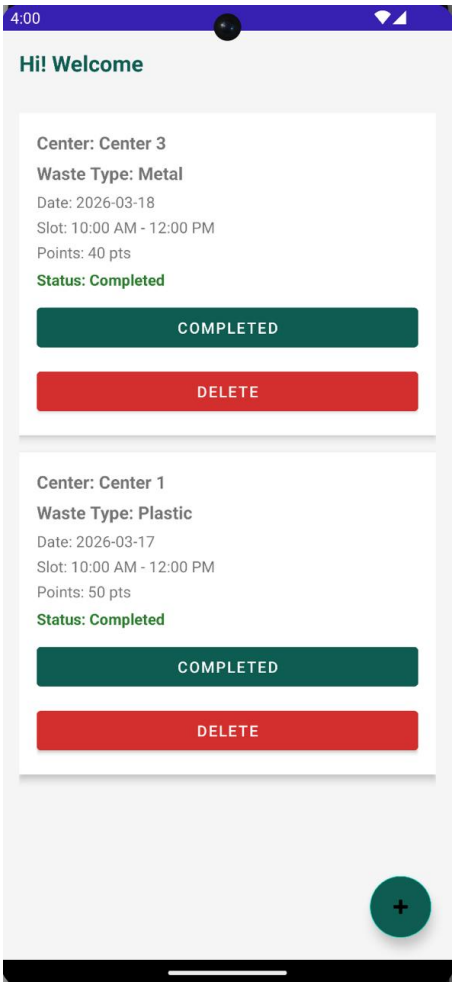
It includes options like Dashboard, Book Slot, Bookings, Points & Rewards, Reviews, and Logout.



Nearby Waste Centers Page-

This page displays a list of nearby waste centers available for users.

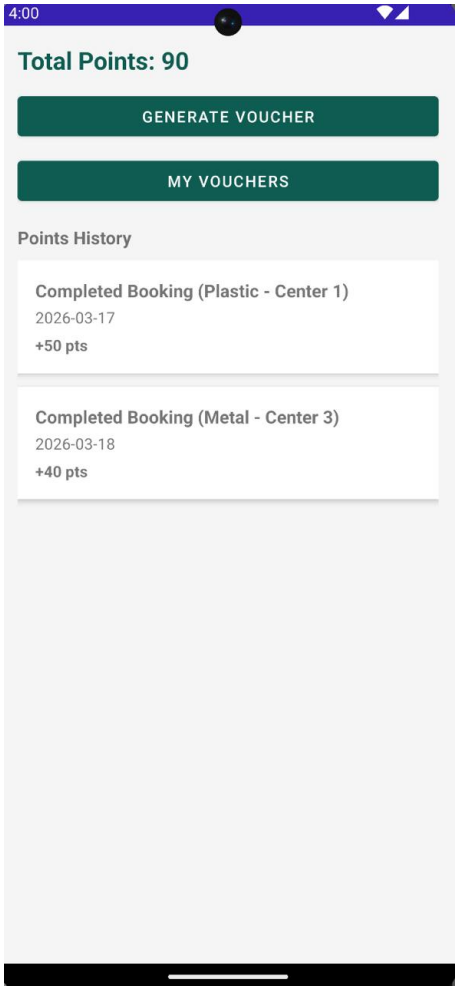
Users can select any center and book a slot for waste disposal or collection services.



Bookings Details Page-

This page displays the user's booked waste collection slots with details such as center name, waste type, date, time, and reward points.

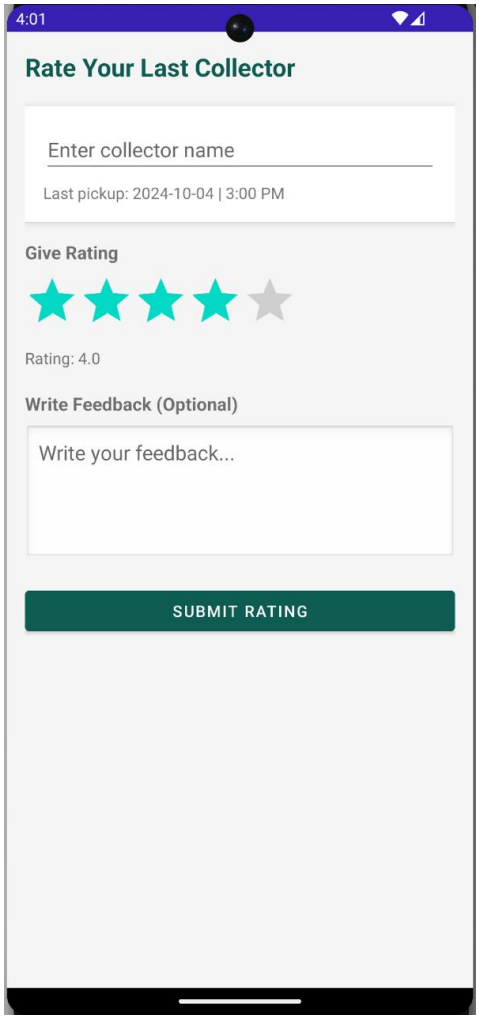
Users can view the booking status and also delete completed bookings if needed.



Your Bookings History-

This page shows a list of all booked trash collection slots with details like center, waste type, date, time, and points earned.

Users can also view the status of each booking.



Rate Last Collector Page-

This page allows users to rate the collector based on their last pickup experience.

Users can give star ratings and optionally write feedback to improve service quality.
